DETAILED ACTION

1. The following action is taken in view of the amendment filed 2/11/05 and an updated search.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claim 21-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Tanaka et al. (US005995341A).

Tanaka et al. teaches a perpendicular recording system comprising a perpendicular magnetic recording disk (2), a perpendicular recording head (30) having a write pole (511) that is moved via the support mechanism (figure 2) across the disk. The pole includes a trailing edge (tW, 511a) and a side edge (pL) with the side edge aligned with compensation angles (theta) with respect to tracks that is greater than zero degrees. As seen from the graph depicted in figure 5, the ratio of tW to pL can be .5 or stated another way the length of the side edge (pL) is two times the length of the trailing

edge (tW). The claimed range as set forth in claim 22 is deemed satisfied by figure 6 within the values 0 - 0.5 as defining tW/pL. As seen from figure 4 the pole has a rectangular cross section, satisfying the limitations of claim 23.

4. Claims 10-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Shukh et al.

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Shukh et al. teaches a perpendicular recording system (figures 1-4) that includes a perpendicular recording disk (4) a perpendicular recording head (10) including a write pole (12) which as seen from figure 1 includes an actuator (5) that moves the recording head back and forth across (radially outward and radially inward) the disk to enable sequential writing of tracks (figure 4) at a zero skew angle (column 3, lines 25-27). This teaching satisfies the limitations of claims 10-11.

Allowable Subject Matter

5. Claims 4-9, 12, 17-20 are allowed. The reasons for allowance of these claims were provided in the previous office action.

Response to Arguments

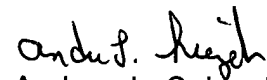

Art Unit: 2651

6. Applicant's arguments with respect to claims 10-11 and 21-23 have been considered but are moot in view of the new ground(s) of rejection.
